

Are there **UNWANTED MOSQUITOES** lurking around YOUR home?

Some mosquitoes carry West Nile virus; others are just a nuisance! They only need a **couple tablespoons** of water to breed, and water can collect just about anywhere.

Don't give mosquitoes a place to hang out – empty standing water in the **hot spots** shown below so you can be sure you're not allowing mosquitoes to breed right under your nose!

GIVE MOSQUITOES THE BOOT!

FIGHT THE BITE

Protect yourself against West Nile Virus

Everything's bigger in Texas; some might say that includes the bugs! Remember the **Four D's** for your defense against mosquitoes:

- **DRAIN** standing water in your yard and neighborhood to cut mosquito breeding sites (old tires, flowerpots, and clogged rain gutters).
- **DUSK & DAWN** are the times of day you should try to stay indoors; this is when mosquitoes are most active.
- **DRESS** in long sleeves and pants when you're outside, and spray thin clothing with repellent.
- **DEET** (N,N-diethyl-m-toluamide) is an ingredient to look for in your insect repellent (check for 10-30%).
